## About Our Company

**ALLOUT FIRE Safety Engineers** based in satellite city of India, we are pleased to introduce ourselves as an organization committed to the protection of life and property from the disaster called FIRE. Over the years we have been working to achieve our mission of safety and security for all of us. In doing so we ensure to offer the products and services in accordance to the latest developments in global standards and technology to our valued customers.

## Mission

**ALLOUT FIRE Safety Engineers** is an organization committed to provide comprehensive solutions for varied Fire Safety, security, surveillance and facility management needs, by continuously evolving processes and train professionals towards creating a safe and secure environment for people at large.

## Vision

Emerge as one of the top leading organizations in the fire safety, surveillance and security arena with the efficient use of modern technology and to provide world class product and technology at the minimum cost to our valued customers

## Why us

We strongly believe in forging relationships rather than one time business deals, what makes us stand out in this competitive market. Our focus is on providing outstanding quality and support with unbeatable rates in the industry.

To achieve this **ALLOUT FIRE Safety Engineers** has built a dedicated team catering exclusively to 'after sales support' which can solve service calls in less than 24 hours.

We have set up a 24 x 7 support centre where all customers can register their queries and expect a resolution within the next 2 working days.

We also have strategic partners across the country that can provide interim and timely support.

## To Sum it up....

we are a group of dedicated and honest professionals looking to provide best in class service to our clients.

# COMING SOON

## Services that we can offer are as follows:

- Supply, Refilling & Servicing of Fire Extinguishers Systems.
- Supply, Installation, Testing & Comm. of Fire Sprinklers System.
- Supply, Installation, Testing & Comm. of Fire Hydrant Systems.
- Gas Suppression Systems. NOVAC, FM200, Co2 Gas Release
- Fire Alarm Systems (Addressable / Conventional), VESDA.
- Supply and Installation of Fire Retardant Door.
- Supply and Installation of Cable Coating & Fire Stop Mortar Seals.
- Provides Annual Maintenance Contract for Fire Fighting Systems.
- Conducts Fire Safety Audit as per Industrial Standard.
- Liaisoning Work i.e. Provisional NOC & Final NOC
- CCTV IP Surveillance Systems / Remote Video Surveillance Systems
- Access Control systems (Biometric/Hand / Retina recognition etc)
- Public Addressing Systems.
- Video Door Phones (Stand Alone / Multi Flats)
- Man Power Supply

## Fire Hydrant System

The Hydrant System comprises of AC motor driven pump sets with all required accessories including valves, instrumentation and controls etc. Complete in all respects. An automatic hydrant system is furnished covering the areas completely from independent. Pipe work from the fire water pump set. The hydrant pipe work is remaining pressurized through the proposed jockey pump taking care of any leakages in the system pipe lines, valves and fittings.

The hydrant system is kept charged by pressurized water at approx. 7 Kg. Cm. Sq. at all times. In the event of fire when any of the hydrant valves in the net work is opened the resultant fall in pressure system is enabling starting the AC MOTOR driven fire water pumping set through pressure switches automatically. One diesel engine pump shall be standby pump serving hydrant system. Apart from the automatic starting of the pump sets, provision shall be kept for manual starting also. Shutting down of the pump sets shall be manual.

## Fire Protection System

Fire hydrants are most commonly used water-based suppression systems for general fire fighting requirements. Automatic water sprinklers are used where quicker responses are required. Automatic gas-based systems are used to protect expensive industrial equipment.

## CO<sub>2</sub>, FM200 & NOVAC1230

are commonly used as fire extinguishing gases. Larger applications also employ foam based suppression techniques.

**ALLOUT FIRE Safety Engineers** promotes the appropriate usage of these systems for greater risk coverage and reduce damages due to a hazard.

## Conventional Fire Alarm Systems

The range of Conventional Fire Alarm Control Panel is ideal for Banks, Small Offices, residential buildings and warehouses. The indication of fire is zone wise here. Audio Notification is provided by hooters, PA system and voice annunciation procedures. Special RS-485 based repeaters and mimic panels are available for reduced wiring options. LCD modules are also available for alphanumeric annunciation of zone names.

## Digital Addressable Fire Alarm Systems

It is a system, which detects fire early, where in all loop devices in the system are individually addressed to provide the panel with absolute unique identification of each Device. The system monitors any changes caused by dust or smoke, and then adjust the calibration accordingly to maintain each sensor at its original sensitivity. The system carries out a SelfTest automatically every 24 hours and as well as separate sensitivity for day and night. The system can be integrated along with building management system, CCTV and Access Control systems ensuring towards total safety and security at one central monitoring station.
